

Sukesh Rao Donthineni

AI DevOps · AI-enabled C4C Functional Solutions · Intelligent CI/CD & Cloud Engineering
· AI-assisted SOX Control Governance · AI-powered Adobe AEM Administration

(901) 578-9772 · sukeshrao27@gmail.com · Roswell, GA 30075

Professional summary

AI-augmented DevOps consultant with 4+ years architecting enterprise CI/CD pipelines, cloud-native deployments, and platform automation across GCP, Azure, and Akamai, now operating with an AI-first delivery model that spans AIOps, AI-assisted code review and release governance, AI-driven SOX evidence collection, AI-augmented SAP C4C functional design with SAP Joule, and AI-powered AEM content governance with Adobe Sensei. Currently engaged at Mohawk Industries (Fortune 500 flooring manufacturer) via Uxified as production owner for PriceFx, SAP Hybris, SAP C4C, Adobe Experience Manager (AEM), and PIM, including AI/ML workloads orchestrated on Kubernetes via Kubeflow, KServe, and Ray. Maintains a clean SOX audit track record as named control owner for PriceFx and Hybris, and serves as Atlassian administrator across multiple business units with deep experience in Jira workflows, automation, and access governance.

Key impact

- ▶ Closed every PriceFx and SAP Hybris SOX audit cycle with zero significant findings as named control owner, with AI-assisted evidence collection compressing audit-prep cycles meaningfully.
- ▶ Reduced developer effort by approximately 60 percent and lifted Scrum efficiency by approximately 30 percent through Jira workflow engineering and AI-assisted ticket routing, summarization, and pipeline automation.
- ▶ Accelerated global application load times by approximately 40 percent through Akamai CDN and Azure Front Door integration, fronted by AI-driven edge anomaly detection.
- ▶ Eliminated manual asset hand-offs entirely with Java automation publishing AEM/DAM assets into PIM, layered with Adobe Sensei AI metadata tagging to lift content-onboarding throughput.
- ▶ Cut mean time to detect across PriceFx, SAP Hybris, AEM, and PIM by overlaying AIOps anomaly detection and AI-assisted log triage on Prometheus, Grafana, and ELK.
- ▶ Raised release confidence and shortened review cycles by embedding AI-assisted code review (GitHub Copilot, Cursor) and AI-driven quality gates into every CI/CD pipeline.

Skills and technologies

AI for DevOps, AIOps and code

AI-assisted log triage, AIOps anomaly detection, GitHub Copilot, Cursor, Amazon CodeWhisperer, AI code review, AI test-case generation, AI-driven dependency scanning

AI on Kubernetes (AI Kubernetes)

Kubeflow, KServe, Ray on Kubernetes, Kueue, Argo Workflows for ML, GPU node-pool scheduling on GKE and AKS

MLOps and Generative AI

MLflow, Vertex AI, Azure ML, model registry, drift monitoring, LangChain, LangGraph, RAG, pgvector, Responsible AI guardrails

AI for SOX, AEM and C4C

AI-assisted SOX evidence collection, audit-log anomaly detection, Adobe Sensei smart tags, AI-driven asset classification, SAP Joule alignment, AI-augmented C4C drafting

DevOps, CI/CD and cloud

Jenkins, GitHub Actions, GCP Cloud Build, Azure DevOps, Bitbucket Pipelines, SonarQube, ArgoCD; GCP (Cloud Run, Vertex AI, IAM), Azure (ACR, App Service, Front Door, Azure ML), AWS basics

Containers, IaC, edge and observability

Docker, Kubernetes, Terraform, Ansible, Helm, Akamai CDN, Azure Front Door, DDoS protection; Prometheus, Grafana, ELK, CloudWatch, Stackdriver, AIOps overlays

SOX, compliance and enterprise apps

SOX control ownership for PriceFx and SAP Hybris, audit evidence, segregation of duties, change management; PriceFx, SAP Hybris, SAP C4C, Adobe AEM (Assets, Sites, Workflows), PIM

Atlassian, languages and legacy

Jira workflows, AI-assisted automation, JSM, Confluence, Bitbucket, EasyBI, Rich Filters; Java, Python (AI tooling), REST, Angular, HTML; COBOL, JCL, DB2, IMS

Professional experience

DevOps Consultant, Mohawk Industries (Contract via Uxified) Apr 2024 to Present
Uxified · Calhoun, GA / Remote

AI DevOps

- ▶ Sustained tight RTO targets across PriceFx, SAP Hybris, AEM, and PIM by owning end-to-end production deployments and post-deploy triage with hotfix coordination and rapid service restoration.
- ▶ Reduced developer effort by approximately 60 percent and lifted Scrum efficiency by approximately 30 percent through Jira automation rules, CI/CD to Jira integrations, SLA routing, and JSM portals across multiple business units.
- ▶ Cut mean incident-detection time and on-call noise by instrumenting Prometheus, Grafana, and ELK observability with AI-assisted log triage and pipeline-anomaly review embedded into the operations workflow.

Intelligent CI/CD and cloud engineering

- ▶ Delivered zero-downtime, automated builds, tests, and deployments for Angular and containerized workloads by architecting CI/CD pipelines on GCP Cloud Build with Cloud Run and Azure Container Registry with App Service.
- ▶ Accelerated global application load times by approximately 40 percent by integrating Akamai CDN edge caching and Azure Front Door, with DDoS protection and intelligent traffic management built in.
- ▶ Raised release confidence and eliminated environment drift by standardizing Docker, Kubernetes, Terraform, Ansible, and Helm patterns and by embedding AI-assisted code review, dependency scanning, and SonarQube quality gates into every pipeline.

AI-assisted SOX control governance

- ▶ Closed every SOX audit cycle for PriceFx and SAP Hybris with zero significant findings as named control owner, covering quarterly evidence, control testing, access reviews, and walk-throughs with internal and external auditors.
- ▶ Produced a clean, defensible audit trail every cycle by authoring repeatable SOX evidence procedures across segregation of duties, change management, access provisioning, and deployment approvals.
- ▶ Hardened deployment pipelines for SOX compliance with mandatory approvals, immutable audit trails, and Jira-to-production traceability, layered with AI-assisted evidence gathering that compressed audit-prep timelines.

AI-enabled C4C functional solutions

- ▶ Kept SAP C4C aligned with upstream pricing and downstream commerce by co-owning deployments and release management across residential and commercial business units, with transports and post-release validation coordinated alongside functional teams.
- ▶ Translated stakeholder requirements into validated C4C configuration changes across sales, service, and marketing workflows, with end-to-end flow validation before promotion.

- ▶ Compressed C4C functional cycle time by introducing AI-assisted requirement-to-configuration drafting and test-case generation with SAP Joule alignment, removing reconciliation gaps with PriceFx, Hybris, and PIM.

AI-powered Adobe AEM administration

- ▶ Eliminated manual asset hand-offs entirely by designing Java automation that publishes digital assets (images, videos, documents, metadata) from AEM/DAM into the PIM platform, layered with Adobe Sensei AI metadata tagging to lift content-onboarding velocity.
- ▶ Sustained asset parity across AEM, PIM, and downstream commerce channels through Java REST API integrations with retry, structured logging, and reconciliation, scaling the pipeline to thousands of assets per cycle without manual intervention.
- ▶ Tightened content governance and audit readiness through user roles, groups, ACLs, and OSGi-level permission configurations on AEM Assets and Sites, with standardized onboarding and offboarding runbooks and healthy author, publish, and dispatcher environments.

Associate Software Engineer, Legato Health Technologies *Jul 2019 to Dec 2021* *Hyderabad, India*

- ▶ Safeguarded claim accuracy for Anthem Inc. by maintaining critical applications in the Claims Tower that validated data from pricing systems including NCN Zelis, CHIPS, and external sources.
- ▶ Delivered reliable, audited releases through COBOL, JCL, DB2, and IMS coding plus unit testing, UTP, and UTR preparation.
- ▶ Sustained data integrity in BAU change cycles via Copybook updates and managed flow adjustments for effective data processing.
- ▶ Protected production stability through impact analysis, change management for releases, and rapid troubleshooting of job abends.
- ▶ Maintained a clean release record by creating and publishing packages across application towers and tracking delivery status to leads.

Education

Master of Science, Data Science, University of Memphis, Memphis, TN *Dec 2023*
Bachelor of Science, Information Technology, Guru Nanak Institute of Engineering and Technology, Hyderabad, India *Jul 2019*
